Five Calendar Months to a New Location in a New Community!

For more than 28 years, Portable Church Industries has been able to help churches launch new expressions of themselves in new communities in 150 Days OR LESS! Here's how they do it:

1.

Month #1 – Discovery Phase:

During the initial conversations, specialists from Portable Church will work with church decision makers to set a timeline and process for launching the new site. The guides from PCI will help local leaders identify target communities/facilities, prepare for leadership/volunteer staffing, develop an internal vision campaign, set realistic budgets, and agreed upon goals and expectations. With these elements in place, an Onsite Consultation is scheduled.

2.

Month #2 – On Site Consultation to Determine DNA, Culture, Branding, and Heartbeat:

There are two main features of a Portable Church Consultation. First, PCI captures all the elements that make your church so healthy and special. Second, they recommend a "STREET TO SEAT" design putting everything you need into a SYSTEM built for SPEED, Volunteer Efficiency, and a professional presentation.

3-4.

Month #3 - #4 – Your Custom Design System is in Production:

During this 8–10-week period, PCI is custom building each of your cases, ordering every piece of gear and assembling it into their specifically design spaces, testing and integrating every piece of technology, and preparing the transportation and storage – complete with branding!

5.

Month #5 – Delivery, Training, Launch & Thrive:

When your new system is completed, a team from PCI arrive on your doorstep, with your system in tow, ready to encourage and train your volunteer team. Day #1 of Delivery is simply a 6–8-hour training event to watch and help your system come to life! Loading your system in and out of your facility. Day two, the volunteer team is in charge, loading in, practicing a real-time run through, and then loading out. There is nothing more rewarding for volunteers than Delivery & Training Weekend.
